AWARIO[®]

AWARIO[®] Screen

With the Awario Screen service, asymptomatic atrial fibrillation and other arrhythmias can be easily screened at the reception, during vaccinations, at home care, or in any healthcare facility. The service can also be used to identify symptomatic arrhythmias.

With the help of a small, easy-to-carry measuring device, the use of the service is effortless for a healthcare professional.

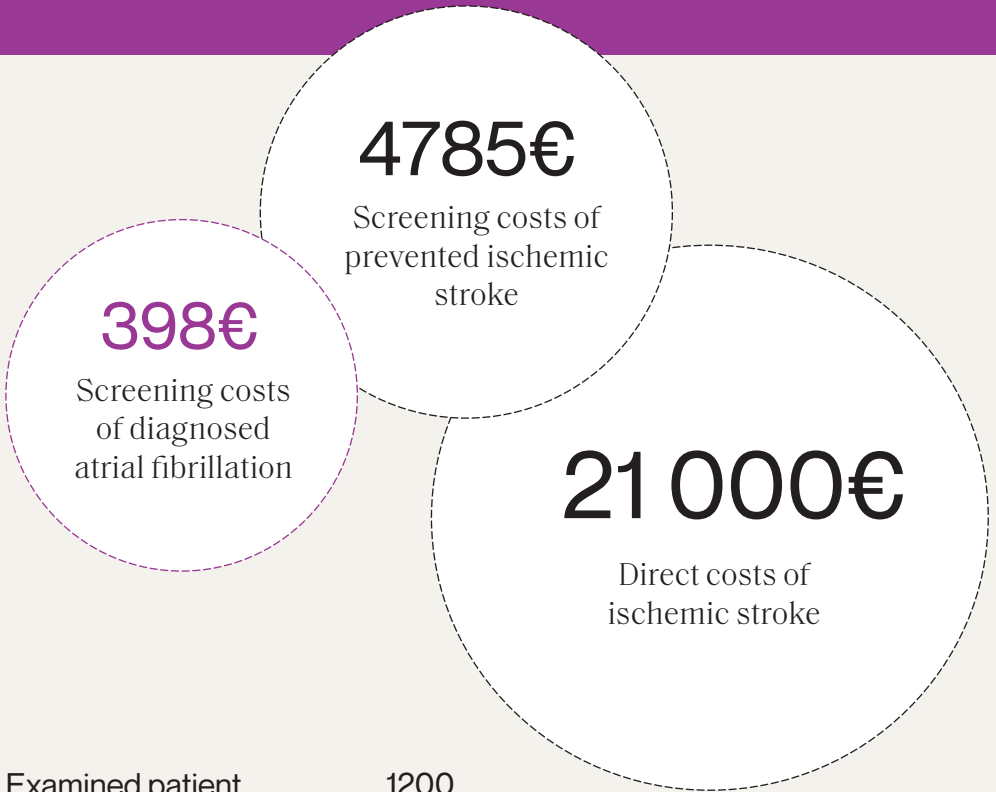

Our scientifically validated intelligent algorithms identify four different types of arrhythmias: 1) Atrial fibrillation, 2) tachycardia, 3) bradycardia and 4) Ventricular extrasystoles.

Medical device

Awario service produces ECG report from every measurement which allows diagnosis of arrhythmias with a high accuracy.

Screening of atrial fibrillation is cost effective

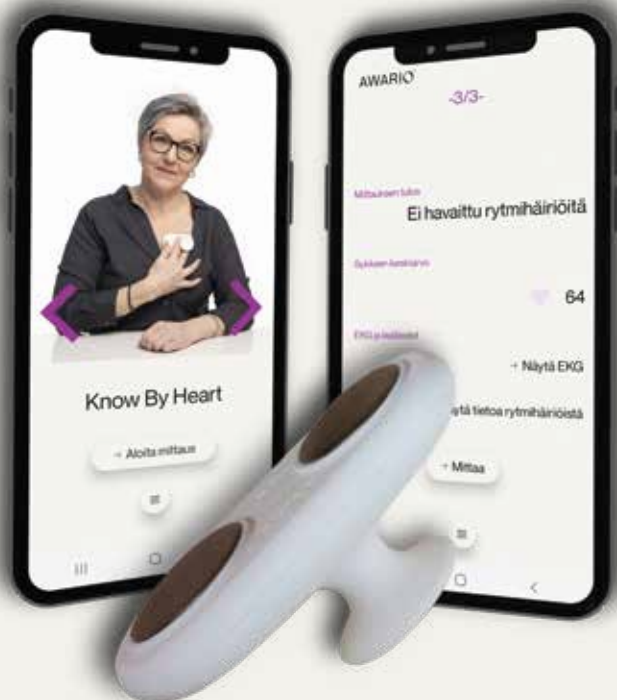

Awario Screen enables reliable and fast screening of atrial fibrillation during health care visits.

Examined patient	1200
Equipment cost	2625€
Physician cost	1080€
Caregiver cost	1080€

Defaults for screening

1% patients with atrial fibrillation	4 recordings / day / device
12 detected AF / prevented ischemic stroke	3 min / recording
