Clear overview of
arrhythmias - without
data overload

Medical device

Awario service produces ECG report from every measurement which allows diagnosis of arrhythmias with a high accuracy.

The Awario Event service is intended for patients who have feelings of arrhythmia, but the cause of the sensation has not been diagnosed. The patient is lent an Awario Care measuring device to take home for the duration of the remote monitoring period. A healthcare professional can monitor measurement remotely via the Awario Portal.

Our system is designed to reduce the time spent going through clinically irrelevant ECG tracings.

Awario Event – arrhythmia monitoring that doesn't waste your time.

Patient performs five ECG recordings per day for a two weeks period.

Without Awario

Healthcare professional interprets all 70 ECG tracings

70

Interpretable ECGs

AWARIO[®] in use

Awario analyzes ECG tracings and alerts for arrhythmias. E.g 5% abnormal findings.

4

Interpretable ECGs
